

Fire Suppression

You should only fight fires smaller than you are and, Do not require breathing Smoke. You should never breathe smoke.

The four classifications of fire are:

A-Ordinary combustibles- Wood, Paper, cloth, etc. **ASH**

B-Flammable and combustible liquids. **BOILS**

C-Electrical fires- **CURRENT**

D- Combustible metals **DONT MESS WITH**

Fire can be controlled by removing any of the three sides of the fire Triangle. Fuel, Oxygen, Heat

Risks associated with hazardous materials can be reduced by: L.I.E.S

Limit the amount of hazardous materials in the home.

Isolate the hazardous material place them in a unattached shed.

Eliminate properly dispose of items you no longer need.

Seperate some things are not ment to be together.

Your personal safty is the most important thing in fire suppression activities. When in doubt stay out or get out.
